IEC 60479-1:2018

Australian/New Zealand Standard™

Effects of current on human beings and livestock

Part 1: General aspects

This is a preview. [Click here to purchase the full publication.](#)

AS/NZS IEC 60479.1:2022

This Joint Australian/New Zealand Standard™ was prepared by Joint Technical Committee EL-001, Wiring Rules. It was approved on behalf of the Council of Standards Australia on 3 March 2022 and by the New Zealand Standards Approval Board on 2 March 2022.

This Standard was published on 25 March 2022.

The following are represented on Committee EL-001:

- Australian Building Codes Board
- Australian Energy Council
- Australian Industry Group
- Communications, Electrical and Plumbing Union — Electrical Division
- Consumers Federation of Australia
- Electrical Regulatory Authorities Council
- Electrical Safety New Zealand
- Electrical Workers Registration Board
- ElectroComms & Energy Utilities Industry Skills Council
- Energy Networks Australia
- Engineers Australia
- Engineering New Zealand
- Institute of Electrical Inspectors
- Master Electricians Australia
- Master Electricians NZ
- National Electrical and Communications Association
- National Electrical Switchboard Manufacturers Association
- WorkSafe New Zealand
- The Manufacturers' Network

This Standard was issued in draft form for comment as DR AS/NZS IEC 60479.1:2021.

Australian/New Zealand Standard™

Effects of current on human beings and livestock

Part 1: General aspects

Originated as part of MP 30—1976.
Revised and redesignated AS 3859—1991.
Jointly revised and redesignated in part as AS/NZS 60479.1:2002.
Previous edition 2010.
Third edition 2022.

Preface

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee EL-001, Wiring Rules, to supersede AS/NZS 60479.1:2010.

The objective of this document is to provide basic guidance on the effects of shock current on human beings and livestock.

For a given current path through the human body, the danger to persons depends mainly on the magnitude and duration of the current flow. However, the time/current zones specified in the following clauses are, in many cases, not directly applicable in practice for designing measures of protection against electrical shock. The necessary criterion is the admissible limit of touch voltage (i.e. the product of the current through the body called touch current and the body impedance) as a function of time. The relationship between current and voltage is not linear because the impedance of the human body varies with the touch voltage, and data on this relationship is therefore required. The different parts of the human body (such as the skin, blood, muscles, other tissues and joints) present to the electric current a certain impedance composed of resistive and capacitive components.

The values of body impedance depend on a number of factors and, in particular, on current path, on touch voltage, duration of current flow, frequency, degree of moisture of the skin, surface area of contact, pressure exerted and temperature.

The impedance values indicated in this document result from a close examination of the experimental results available from measurements carried out principally on corpses and on some living persons.

Knowledge of the effects of alternating current is primarily based on the findings related to the effects of current at frequencies of 50 Hz or 60 Hz which are the most common in electrical installations. The values given are, however, deemed applicable over the frequency range from 15 Hz to 100 Hz, threshold values at the limits of this range being higher than those at 50 Hz or 60 Hz. Principally the risk of ventricular fibrillation is considered to be the main mechanism of death of fatal electrical accidents.

This basic safety publication is primarily intended for use by technical committees in the preparation of standards in accordance with the principles laid down in IEC Guide 104 and ISO/IEC Guide 51. It is not intended for use by manufacturers or certification bodies.

This document is identical with, and has been reproduced from, IEC 60479-1:2018, *Effects of current on human beings and livestock — Part 1: General aspects*.

As this document has been reproduced from an International document, a full point substitutes for a comma when referring to a decimal marker. Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

The terms “normative” and “informative” are used in Standards to define the application of the appendices or annexes to which they apply. A “normative” appendix or annex is an integral part of a Standard, whereas an “informative” appendix or annex is only for information and guidance.

NOTES

CONTENTS

FOREWORD.....	6
INTRODUCTION.....	8
1 Scope.....	9
2 Normative references	10
3 Terms and definitions	10
3.1 General definitions.....	10
3.2 Effects of sinusoidal alternating current in the range 15 Hz to 100 Hz	11
3.3 Effects of direct current.....	12
4 Electrical impedance of the human body and livestock	13
4.1 General.....	13
4.2 Internal impedance of the human body (Z_i)	13
4.3 Impedance of the skin (Z_s).....	13
4.4 Total impedance of the human body (Z_T)	13
4.5 Factors affecting initial resistance of the human body (R_0).....	14
4.6 Values of the total impedance of the human body (Z_T).....	14
4.6.1 Total body impedance dependence for large, medium and small surface areas of contact.....	14
4.6.2 Sinusoidal alternating current 50/60 Hz for large surface areas of contact	14
4.6.3 Sinusoidal alternating current 50/60 Hz for medium and small surface areas of contact.....	17
4.6.4 Sinusoidal alternating current with frequencies up to 20 kHz and above	20
4.6.5 Direct current.....	21
4.7 Value of the initial resistance of the human body (R_0)	22
4.8 Characteristics of the impedance of the body of livestock	22
5 Effects of sinusoidal alternating current in the range of 15 Hz to 150 Hz.....	22
5.1 General.....	22
5.2 Threshold of perception	22
5.3 Threshold of reaction	22
5.4 Immobilization.....	22
5.5 Threshold of let-go.....	23
5.6 Threshold of ventricular fibrillation	23
5.7 Other effects related to electric shocks	23
5.8 Effects of current on the skin	24
5.9 Description of time/current zones (see Figure 20)	24
5.10 Application of heart-current factor (F).....	25
6 Effects of direct current	26
6.1 General.....	26
6.2 Threshold of perception and threshold of reaction.....	26
6.3 Threshold of immobilization and threshold of let-go.....	26
6.4 Threshold of ventricular fibrillation	26
6.5 Other effects of current	27
6.6 Description of time/current zones (see Figure 22)	27
6.7 Heart factor.....	28
6.8 Effects of anodic versus cathodic DC currents	45
Annex A (normative) Measurements of the total body impedances Z_T made on living human beings and on corpses and statistical analysis of the results	48
Annex B (normative) Influence of frequency on the total body impedance (Z_T).....	51

Annex C (normative) Total body resistance (R_T) for direct current.....	52
Annex D (informative) Examples of calculations of Z_T	53
Annex E (informative) Theories of ventricular fibrillation.....	56
Annex F (informative) Quantities of upper limit of vulnerability (ULV) and lower limit of vulnerability (LLV)	57
Annex G (informative) Circuit simulation methods in electric shock evaluation	58
Annex H (normative) Effects of currents passing through the body of livestock	61
H.1 General.....	61
H.2 Principal consideration of the risk of ventricular fibrillation for livestock	61
H.3 Characteristics of the impedance of the body of livestock	62
H.4 Internal impedance of animals (Z_i)	62
H.5 Impedance of the hide and skin (Z_P).....	63
H.6 Impedance (resistance) of the hoof (Z_h , R_h).....	63
H.7 Total body impedance (Z_T)	63
H.8 Initial body resistance (R_0).....	64
H.9 Values of the total body impedance (Z_T)	64
H.10 Values of the initial resistance of the body (R_0).....	65
H.11 Effects on livestock of sinusoidal alternating current in the range from 15 Hz to 100 Hz	65
H.11.1 General	65
H.11.2 Threshold of reaction	66
H.11.3 Threshold of ventricular fibrillation	66
Bibliography.....	69
Figure 1 – Impedances of the human body.....	28
Figure 2 – Internal partial impedances Z_{ip} of the human body.....	29
Figure 3 – Simplified schematic diagram for the internal impedances of the human body	30
Figure 4 – Total body impedance Z_T (50 %) for a current path hand to hand, for large surface areas of contact in dry, water-wet and saltwater-wet conditions for a percentile rank of 50 % of the population for touch voltages $U_T = 25$ V to 700 V, AC 50/60 Hz	31
Figure 5 – Dependence of the total impedance Z_T of one living person on the surface area of contact in dry conditions and at touch voltage (50 Hz)	32
Figure 6 – Dependence of the total body impedance Z_T on the touch voltage U_T for a current path from the tips of the right to the left forefinger compared with large surface areas of contact from the right to the left hand in dry conditions measured on one living person, touch voltage range $U_T = 25$ V to 200 V, AC 50 Hz, duration of current flow max. 25 ms.....	33
Figure 7 – Dependence of the total body impedance Z_T for the 50 th percentile rank of a population of living human beings for large, medium and small surface areas of contact (order of magnitude 10 000 mm ² , 1 000 mm ² and 100 mm ² respectively) in dry conditions at touch voltages $U_T = 25$ V to 200 V AC 50/60 Hz.....	34
Figure 8 – Dependence of the total body impedance Z_T for the 50 th percentile rank of a population of living human beings for large, medium and small surface areas of contact (order of magnitude 10 000 mm ² , 1 000 mm ² and 100 mm ² respectively) in water-wet conditions at touch voltages $U_T = 25$ V to 200 V, AC 50/60 Hz	35
Figure 9 – Dependence of the total body impedance Z_T for the 50 th percentile rank of a population of living human beings for large, medium and small surface areas of contact (order of magnitude 10 000 mm ² , 1 000 mm ² and 100 mm ² respectively) in saltwater-wet conditions at touch voltages $U_T = 25$ V to 200 V, AC 50/60 Hz.....	36

Figure 10 – Values for the total body impedance Z_T measured on 10 living human beings with a current path hand to hand and large surface areas of contact in dry conditions at a touch voltage of 10 V and frequencies from 25 Hz to 20 kHz	37
Figure 11 – Values for the total body impedance Z_T measured on one living human being with a current path hand to hand and large surface areas of contact in dry conditions at a touch voltage of 25 V and frequencies from 25 Hz to 2 kHz	37
Figure 12 – Frequency dependence of the total body impedance Z_T of a population for a percentile rank of 50 % for touch voltages from 10 V to 1 000 V and a frequency range from 50 Hz to 150 kHz for a current path hand to hand or hand to foot, large surface areas of contact in dry conditions	38
Figure 13 – Statistical value of total body impedances Z_T and body resistances R_T for a percentile rank of 50 % of a population of living human beings for the current path hand to hand, large surface areas of contact, dry conditions, for touch voltages up to 700 V, for AC 50/60 Hz and DC	38
Figure 14 – Dependence of the alteration of human skin condition on current density i_T and duration of current flow	39
Figure 15 – Electrodes used for the measurement of the dependence of the impedance of the human body Z_T on the surface area of contact	40
Figure 16 – Oscillograms of touch voltages U_T and touch currents I_T for AC, current path hand to hand, large surface areas of contact in dry conditions taken from measurements	41
Figure 17 – Occurrence of the vulnerable period of ventricles during the cardiac cycle	42
Figure 18 – Triggering of ventricular fibrillation in the vulnerable period – Effects on electro-cardiogram (ECG) and blood pressure	42
Figure 19 – Fibrillation data for dogs, pigs and sheep from experiments and for persons calculated from statistics of electrical accidents with transversal direction of current flow hand to hand and touch voltages $U_T = 220$ V and 380 V AC with body impedances Z_T (5 %)	43
Figure 20 – Conventional time/current zones of effects of AC currents (15 Hz to 100 Hz) on persons for a current path corresponding to left hand to feet (see Table 11)	44
Figure 21 – Oscillogram of touch voltages U_T and touch current I_T for DC, current path hand to hand, large surface areas of contact in dry conditions	44
Figure 22 – Conventional time/current zones of effects of DC currents on persons for a longitudinal upward current path (see Table 13)	45
