Approved July 25, 2018

American National Standards Institute

American National Standard

Approval of an American National Standard requires verification by ANSI that the requirements for due process, consensus and other criteria for approval have been met by the standards developer. Consensus is established when, in the judgment of the ANSI Board of Standards Review, substantial agreement has been reached by directly and materially affected interests. Substantial agreement means much more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that a concerted effort be made toward their resolution. The use of American National Standards is completely voluntary; their existence does not in any respect preclude anyone, whether they have approved the standards or not, from manufacturing, marketing, purchasing or using products, processes, or procedures not conforming to the standards. The American National Standards Institute does not develop standards and will in no circumstance give an interpretation of any American National Standard, Moreover, no person shall have the right or authority to issue an interpretation of an American National Standard in the name of the American National Standards Institute. Requests for interpretation should be addressed to the secretariat or sponsor whose name appears on the title page of this standard.

Caution Notice: This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken periodically to reaffirm, revise or withdraw this standard. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute.

Foreword (This Foreword is not a part of American National Standard A10.7-2018.)

This standard is one of a series of safety standards that have been formulated by the Accredited Standards Committee on Safety in Construction and Demolition Operations, A10. It is expected that the standards in the A10 series will find a major application in industry, serving as a guide to contractors, labor and equipment manufacturers. For the convenience of users, a list of existing and proposed standards in the A10 series for Safety Requirements in Construction and Demolition Operations follows.

A10.1 Pre-Project & Pre-Task Safety & Health Planning A10.2 Safety, Health and Environmental Training (under development) Powder-Actuated Fastening Systems A10.3 A10.4 Personnel Hoists and Employee Elevators A10.5 Material Hoists A10.6 **Demolition Operations** A10.7 Use, Storage, Handling and Site Movement of Commercial Explosives and Blasting Agents A10.8 Scaffolding A10.9 Concrete and Masonry Construction A10.10 Temporary and Portable Space Heating Devices A10.11 Personnel Nets A10.12 Excavation A10.13 Steel Erection A10.15 Dredging A10.16 Tunnels, Shafts and Caissons Safe Operating Practices for Hot Mix Asphalt (HMA) Construction A10.17 A10.18 Temporary Roof and Floor Holes, Wall Openings, Stairways and Other Unprotected Edges Pile Installation and Extraction Operations A10.19 A10.20 Ceramic Tile, Terrazzo, and Marble Work A10.21 Safe Construction and Demolition of Wind Generation/Turbine Facilities (under development) A10.22 Rope-Guided and Non-Guided Workers' Hoists Safety Requirements for the Installation of Drilled Shafts A10.23 A10.24 Roofing - Safety Requirements for Low-Sloped Roofs A10.25 Sanitation in Construction **Emergency Procedures for Construction Sites** A10.26 Hot Mix Asphalt Facilities A10.27 Work Platforms Suspended from Cranes or Derricks A10.28 Aerial Platforms in Construction (under development) A10.29 A10.31 Digger-Derricks A10.32 Personal Fall Protection Used in Construction and Demolition Operations Safety and Health Program Requirements for Multi-Employer Projects A10.33 **Public Protection** A10.34 A10.37 **Debris Nets** A10.38 Basic Elements of a Program to Provide a Safe and Healthful Work Environment A10.39 Construction Safety and Health Audit Program A10.40 Reduction of Musculoskeletal Problems in Construction A10.42 Rigging Qualifications and Responsibilities in the Construction Industry A10.43 Confined Spaces in Construction and Demolition Operations A10.44 Lockout/Tagout in Construction A10.46 Hearing Loss Prevention A10.47 **Highway Construction Safety** A10.48 Communication Structures

One purpose of these standards is to serve as guides to governmental authorities having jurisdiction over subjects within the scope of the A10 Committee standards. If these standards are adopted for governmental use, the reference of other national codes or standards in individual volumes may be changed to refer to the corresponding regulations.

A10.49

Control of Health Hazards

Normative Requirements

This standard uses the single column format common to many international standards. The normative requirements appear aligned to the left margin. To meet the requirements of this standard, machinery, equipment and process suppliers and users must conform to these normative requirements. These requirements typically use the verb "shall."

NOTE: The informative or explanatory notes in this standard appear indented, in italics, in a reduced font size, which is an effort to provide a visual signal to the reader that this is informative note, not normative text, and is not to be considered part of the requirements of this standard; this text is advisory in nature only. The suppliers and users are not required to conform to the informative note. The informative note is presented in this manner in an attempt to enhance readability and to provide explanation or guidance to the sections they follow.

Revisions: The A10 Committee welcomes proposals for revisions to this standard. Revisions are made to the standard periodically (usually five years from the date of the standard) to incorporate changes that appear necessary or desirable, as demonstrated by experience gained from the application of the standard. Proposals should be as specific as possible, citing the relevant section number(s), the proposed wording and the reason for the proposal. Pertinent documentation would enable the A10 Committee to process the changes in a more-timely manner.

Interpretations: Upon a request in writing to the Secretariat, the A10 Committee will render an interpretation of any requirement of the standard. The request for interpretation should be clear, citing the relevant section number(s) and phrased as a request for a clarification of a specific requirement. Oral interpretations are not provided.

No one but the A10 Committee (through the A10 Secretariat) is authorized to provide any interpretation of this standard.

Approval: Neither the A10 Committee nor American National Standards Institute (ANSI) approves, certifies, rates or endorses any item, construction, proprietary device or activity.

Appendices: Appendices are included in most standards to provide the user with additional information related to the subject of the standard. Appendices are not part of the approved standard.

Checklists: Checklists included in A10 standards may be copied and used in non-commercial settings only.

Committee Meetings: The A10 Committee meets twice per year. Persons wishing to attend a meeting should contact the Secretariat for information.

Standard Approval: This standard was processed and approved for submittal to ANSI by the American National Standards Committee on Safety in Construction and Demolition Operations, A10. Approval of the standard does not necessarily imply (nor is it required) that all Committee members voted for its approval. At the time ANSI approved this standard, the A10 Committee had the following members:

Richard King, CSP, Chair Steven Rank, Vice Chair Timothy R. Fisher, CSP, CHMM, ARM, CPEA, Secretary Lauren Bauerschmidt, MS Engr, CSP, Assistant Secretary Jennie Dalesandro, Administrative Technical Support
