About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigenda or an amendment might have been published.

IEC Catalogue - webstore.iec.ch/catalogue

The stand-alone application for consulting the entire bibliographical information on IEC International Standards, Technical Specifications, Technical Reports and other documents. Available for PC, Mac OS, Android Tablets and iPad.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and also once a month by email.

Electropedia - www.electropedia.org

The world's leading online dictionary of electronic and electrical terms containing 21 000 terms and definitions in English and French, with equivalent terms in 16 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

IEC Glossary - std.iec.ch/glossary

67 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

CONTENTS

FOREWORD.....	6
INTRODUCTION.....	8
1 Scope.....	9
2 Normative references	10
3 Terms and definitions	10
3.1 General definitions.....	10
3.2 Effects of sinusoidal alternating current in the range 15 Hz to 100 Hz	11
3.3 Effects of direct current.....	12
4 Electrical impedance of the human body and livestock	13
4.1 General.....	13
4.2 Internal impedance of the human body (Z_i)	13
4.3 Impedance of the skin (Z_s).....	13
4.4 Total impedance of the human body (Z_T)	13
4.5 Factors affecting initial resistance of the human body (R_0).....	14
4.6 Values of the total impedance of the human body (Z_T).....	14
4.6.1 Total body impedance dependence for large, medium and small surface areas of contact.....	14
4.6.2 Sinusoidal alternating current 50/60 Hz for large surface areas of contact	14
4.6.3 Sinusoidal alternating current 50/60 Hz for medium and small surface areas of contact.....	17
4.6.4 Sinusoidal alternating current with frequencies up to 20 kHz and above	20
4.6.5 Direct current.....	21
4.7 Value of the initial resistance of the human body (R_0)	22
4.8 Characteristics of the impedance of the body of livestock	22
5 Effects of sinusoidal alternating current in the range of 15 Hz to 150 Hz.....	22
5.1 General.....	22
5.2 Threshold of perception	22
5.3 Threshold of reaction	22
5.4 Immobilization.....	22
5.5 Threshold of let-go.....	23
5.6 Threshold of ventricular fibrillation	23
5.7 Other effects related to electric shocks	23
5.8 Effects of current on the skin	24
5.9 Description of time/current zones (see Figure 20)	24
5.10 Application of heart-current factor (F).....	25
6 Effects of direct current	26
6.1 General.....	26
6.2 Threshold of perception and threshold of reaction.....	26
6.3 Threshold of immobilization and threshold of let-go.....	26
6.4 Threshold of ventricular fibrillation	26
6.5 Other effects of current	27
6.6 Description of time/current zones (see Figure 22)	27
6.7 Heart factor.....	28
6.8 Effects of anodic versus cathodic DC currents	45
Annex A (normative) Measurements of the total body impedances Z_T made on living human beings and on corpses and statistical analysis of the results	48
Annex B (normative) Influence of frequency on the total body impedance (Z_T).....	51

Annex C (normative) Total body resistance (R_T) for direct current.....	52
Annex D (informative) Examples of calculations of Z_T	53
Annex E (informative) Theories of ventricular fibrillation.....	56
Annex F (informative) Quantities of upper limit of vulnerability (ULV) and lower limit of vulnerability (LLV)	57
Annex G (informative) Circuit simulation methods in electric shock evaluation	58
Annex H (normative) Effects of currents passing through the body of livestock	61
H.1 General.....	61
H.2 Principal consideration of the risk of ventricular fibrillation for livestock	61
H.3 Characteristics of the impedance of the body of livestock	62
H.4 Internal impedance of animals (Z_i)	62
H.5 Impedance of the hide and skin (Z_P).....	63
H.6 Impedance (resistance) of the hoof (Z_h , R_h).....	63
H.7 Total body impedance (Z_T)	63
H.8 Initial body resistance (R_0).....	64
H.9 Values of the total body impedance (Z_T)	64
H.10 Values of the initial resistance of the body (R_0).....	65
H.11 Effects on livestock of sinusoidal alternating current in the range from 15 Hz to 100 Hz	65
H.11.1 General	65
H.11.2 Threshold of reaction	66
H.11.3 Threshold of ventricular fibrillation	66
Bibliography.....	69
Figure 1 – Impedances of the human body.....	28
Figure 2 – Internal partial impedances Z_{ip} of the human body.....	29
Figure 3 – Simplified schematic diagram for the internal impedances of the human body	30
Figure 4 – Total body impedance Z_T (50 %) for a current path hand to hand, for large surface areas of contact in dry, water-wet and saltwater-wet conditions for a percentile rank of 50 % of the population for touch voltages $U_T = 25$ V to 700 V, AC 50/60 Hz	31
Figure 5 – Dependence of the total impedance Z_T of one living person on the surface area of contact in dry conditions and at touch voltage (50 Hz)	32
Figure 6 – Dependence of the total body impedance Z_T on the touch voltage U_T for a current path from the tips of the right to the left forefinger compared with large surface areas of contact from the right to the left hand in dry conditions measured on one living person, touch voltage range $U_T = 25$ V to 200 V, AC 50 Hz, duration of current flow max. 25 ms.....	33
Figure 7 – Dependence of the total body impedance Z_T for the 50 th percentile rank of a population of living human beings for large, medium and small surface areas of contact (order of magnitude 10 000 mm ² , 1 000 mm ² and 100 mm ² respectively) in dry conditions at touch voltages $U_T = 25$ V to 200 V AC 50/60 Hz.....	34
Figure 8 – Dependence of the total body impedance Z_T for the 50 th percentile rank of a population of living human beings for large, medium and small surface areas of contact (order of magnitude 10 000 mm ² , 1 000 mm ² and 100 mm ² respectively) in water-wet conditions at touch voltages $U_T = 25$ V to 200 V, AC 50/60 Hz	35
Figure 9 – Dependence of the total body impedance Z_T for the 50 th percentile rank of a population of living human beings for large, medium and small surface areas of contact (order of magnitude 10 000 mm ² , 1 000 mm ² and 100 mm ² respectively) in saltwater-wet conditions at touch voltages $U_T = 25$ V to 200 V, AC 50/60 Hz.....	36

Figure 10 – Values for the total body impedance Z_T measured on 10 living human beings with a current path hand to hand and large surface areas of contact in dry conditions at a touch voltage of 10 V and frequencies from 25 Hz to 20 kHz	37
Figure 11 – Values for the total body impedance Z_T measured on one living human being with a current path hand to hand and large surface areas of contact in dry conditions at a touch voltage of 25 V and frequencies from 25 Hz to 2 kHz	37
Figure 12 – Frequency dependence of the total body impedance Z_T of a population for a percentile rank of 50 % for touch voltages from 10 V to 1 000 V and a frequency range from 50 Hz to 150 kHz for a current path hand to hand or hand to foot, large surface areas of contact in dry conditions	38
Figure 13 – Statistical value of total body impedances Z_T and body resistances R_T for a percentile rank of 50 % of a population of living human beings for the current path hand to hand, large surface areas of contact, dry conditions, for touch voltages up to 700 V, for AC 50/60 Hz and DC	38
Figure 14 – Dependence of the alteration of human skin condition on current density i_T and duration of current flow	39
Figure 15 – Electrodes used for the measurement of the dependence of the impedance of the human body Z_T on the surface area of contact	40
Figure 16 – Oscillograms of touch voltages U_T and touch currents I_T for AC, current path hand to hand, large surface areas of contact in dry conditions taken from measurements	41
Figure 17 – Occurrence of the vulnerable period of ventricles during the cardiac cycle	42
Figure 18 – Triggering of ventricular fibrillation in the vulnerable period – Effects on electro-cardiogram (ECG) and blood pressure	42
Figure 19 – Fibrillation data for dogs, pigs and sheep from experiments and for persons calculated from statistics of electrical accidents with transversal direction of current flow hand to hand and touch voltages $U_T = 220$ V and 380 V AC with body impedances Z_T (5 %)	43
Figure 20 – Conventional time/current zones of effects of AC currents (15 Hz to 100 Hz) on persons for a current path corresponding to left hand to feet (see Table 11)	44
Figure 21 – Oscillogram of touch voltages U_T and touch current I_T for DC, current path hand to hand, large surface areas of contact in dry conditions	44
Figure 22 – Conventional time/current zones of effects of DC currents on persons for a longitudinal upward current path (see Table 13)	45
Figure 23 – Let-go currents for 60 Hz sinusoidal current	45
Figure 24 – Effects of anodic versus cathodic DC currents	46
Figure 25 – Pulsed DC stimulation of single heart cells	47
Figure G.1 – Electric shock in electrical model by Hart [33] including startle reaction effect	59
Figure H.1 – Current flow and impedances of the relevant parts of the body of a cow for current path from the nose to the legs	62
Figure H.2 – Diagrams for an animal, for a current path from the nose to the four legs (path A) and from the forelegs to the hindlegs (path B)	62
Figure H.3 – Diagram for the total body impedance for cattle for a percentage of 5 % of the population	65
Figure H.4 – Ventricular fibrillation for sheep	66
Figure H.5 – Minimum fibrillating currents of sheep as a function of weight for a shock duration of 3 s [55]	67
Figure H.6 – Minimum fibrillating currents (averages) of various species of livestock as a function of weight for a shock duration of 3 s [53]	68
Table 1 – Total body impedances Z_T for a current path hand to hand AC 50/60 Hz, for large surface areas of contact in dry conditions	15

Table 2 – Total body impedances Z_T for a current path hand to hand AC 50/60 Hz, for large surface areas of contact in water-wet conditions	16
Table 3 – Total body impedances Z_T for a current path hand to hand AC 50/60 Hz, for large surface areas of contact in saltwater-wet conditions	17
Table 4 – Total body impedances Z_T for a current path hand to hand for medium surface areas of contact in dry conditions at touch voltages $U_T = 25$ V to 200 V AC 50/60 Hz (values rounded to 25 Ω)	18
Table 5 – Total body impedances Z_T for a current path hand to hand for medium surface areas of contact in water-wet conditions at touch voltages $U_T = 25$ V to 200 V AC 50/60 Hz (values rounded to 25 Ω)	19
Table 6 – Total body impedances Z_T for a current path hand to hand for medium surface areas of contact in saltwater-wet conditions at touch voltages $U_T = 25$ V to 200 V AC 50/60 Hz (values rounded to 5 Ω)	19
Table 7 – Total body impedances Z_T for a current path hand to hand for small surface areas of contact in dry conditions at touch voltages $U_T = 25$ V to 200 V AC 50/60 Hz (values rounded to 25 Ω)	19
Table 8 – Total body impedances Z_T for a current path hand to hand for small surface areas of contact in water-wet conditions at touch voltages $U_T = 25$ V to 200 V AC 50/60 Hz (values rounded to 25 Ω)	20
Table 9 – Total body impedances Z_T for a current path hand to hand for small surface areas of contact in saltwater-wet conditions at touch voltages $U_T = 25$ V to 200 V AC 50/60 Hz (values rounded to 5 Ω)	20
Table 10 – Total body resistances R_T for a current path hand to hand, direct current, for large surface areas of contact in dry conditions	21
Table 11 – Time/current zones for AC 15 Hz to 100 Hz for hand to feet pathway – Summary of zones of Figure 20	25
Table 12 – Heart-current factor F for different current paths	26
Table 13 – Time/current zones for direct current for hand to feet pathway – Summary of zones of Figure 22	28
Table A.1 – Total body impedances Z_T , electrodes type A for dry conditions and deviation factors F_D (5 % and 95 %)	48
Table A.2 – Total body impedances Z_T , electrodes type B for dry, water-wet and saltwater-wet conditions and deviation factors F_D (5 % and 95 %)	48
Table A.3 – Total body impedances Z_T for dry, water-wet and saltwater-wet conditions and deviation factors F_D (5 % and 95 %)	48
Table A.4 – Deviation factors F_D (5 %) and F_D (95 %) for dry and water-wet conditions in the touch voltage range $U_T = 25$ V up to 400 V for large, medium and small surface areas of contact	50
Table D.1 – 50 th percentile values for the total body impedance for a current path hands-feet, medium surface area of contact for hands, large for feet, reduction factor 0,8, dry conditions, touch currents I_T and electrophysiological effects	54
Table G.1 – Body impedance examples (uncompensated)	59
Table H.1 – Impedance (resistance) of the hooves of cattle (Z_h , R_h) for AC voltages up to 230 V, 50/60 Hz	63
Table H.2 – Total body impedances Z_T for AC 50/60 Hz for cattle for touch voltages up to 230 V	64
Table H.3 – Initial body resistance R_0 for cattle	65
Table H.4 – Threshold of ventricular fibrillation for AC 50/60 Hz [53] [54] for different species of livestock, for a shock duration of 3 s	67

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**EFFECTS OF CURRENT ON HUMAN BEINGS
AND LIVESTOCK –****Part 1: General aspects****FOREWORD**

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 60479-1 has been prepared by IEC technical committee 64: Electrical installations and protection against electric shock.

This first edition cancels and replaces IEC TS 60479-1:2005, Amendment 1:2016 and IEC TR 60479-3:1998. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to IEC TS 60479-1 and IEC TR 60479-3:

- The contents of IEC TR 60479-3 relating to aspects unique to the effects of current passing through the bodies of livestock have been incorporated into a new Annex H (normative).

It has the status of a basic safety publication in accordance with IEC Guide 104.
