

# Standard on Explosion Prevention Systems

2019

# IMPORTANT NOTICES AND DISCLAIMERS CONCERNING NFPA® STANDARDS

NFPA<sup>®</sup> codes, standards, recommended practices, and guides ("NFPA Standards"), of which the document contained herein is one, are developed through a consensus standards development process approved by the American National Standards Institute. This process brings together volunteers representing varied viewpoints and interests to achieve consensus on fire and other safety issues. While the NFPA administers the process and establishes rules to promote fairness in the development of consensus, it does not independently test, evaluate, or verify the accuracy of any information or the soundness of any judgments contained in NFPA Standards.

The NFPA disclaims liability for any personal injury, property, or other damages of any nature whatsoever, whether special, indirect, consequential or compensatory, directly or indirectly resulting from the publication, use of, or reliance on NFPA Standards. The NFPA also makes no guaranty or warranty as to the accuracy or completeness of any information published herein.

In issuing and making NFPA Standards available, the NFPA is not undertaking to render professional or other services for or on behalf of any person or entity. Nor is the NFPA undertaking to perform any duty owed by any person or entity to someone else. Anyone using this document should rely on his or her own independent judgment or, as appropriate, seek the advice of a competent professional in determining the exercise of reasonable care in any given circumstances.

The NFPA has no power, nor does it undertake, to police or enforce compliance with the contents of NFPA Standards. Nor does the NFPA list, certify, test, or inspect products, designs, or installations for compliance with this document. Any certification or other statement of compliance with the requirements of this document shall not be attributable to the NFPA and is solely the responsibility of the certifier or maker of the statement.

# **REVISION SYMBOLS IDENTIFYING CHANGES FROM THE PREVIOUS EDITION**

Text revisions are shaded. A  $\triangle$  before a section number indicates that words within that section were deleted and a  $\triangle$  to the left of a table or figure number indicates a revision to an existing table or figure. When a chapter was heavily revised, the entire chapter is marked throughout with the  $\triangle$  symbol. Where one or more sections were deleted, a • is placed between the remaining sections. Chapters, annexes, sections, figures, and tables that are new are indicated with an **N**.

Note that these indicators are a guide. Rearrangement of sections may not be captured in the markup, but users can view complete revision details in the First and Second Draft Reports located in the archived revision information section of each code at www.nfpa.org/docinfo. Any subsequent changes from the NFPA Technical Meeting, Tentative Interim Amendments, and Errata are also located there.

## **REMINDER: UPDATING OF NFPA STANDARDS**

Users of NFPA codes, standards, recommended practices, and guides ("NFPA Standards") should be aware that these documents may be superseded at any time by the issuance of a new edition, may be amended with the issuance of Tentative Interim Amendments (TIAs), or be corrected by Errata. It is intended that through regular revisions and amendments, participants in the NFPA standards development process consider the then-current and available information on incidents, materials, technologies, innovations, and methods as these develop over time and that NFPA Standards reflect this consideration. Therefore, any previous edition of this document no longer represents the current NFPA Standard on the subject matter addressed. NFPA encourages the use of the most current edition of any NFPA Standard [as it may be amended by TIA(s) or Errata] to take advantage of current experience and understanding. An official NFPA Standard at any point in time consists of the current edition of the document, including any issued TIAs and Errata then in effect.

To determine whether an NFPA Standard has been amended through the issuance of TIAs or corrected by Errata, visit the "Codes & Standards" section at www.nfpa.org.

# ADDITIONAL IMPORTANT NOTICES AND DISCLAIMERS CONCERNING NFPA® STANDARDS

## Updating of NFPA Standards

Users of NFPA codes, standards, recommended practices, and guides ("NFPA Standards") should be aware that these documents may be superseded at any time by the issuance of a new edition, may be amended with the issuance of Tentative Interim Amendments (TIAs), or be corrected by Errata. It is intended that through regular revisions and amendments, participants in the NFPA standards development process consider the then-current and available information on incidents, materials, technologies, innovations, and methods as these develop over time and that NFPA Standards reflect this consideration. Therefore, any previous edition of this document no longer represents the current NFPA Standard on the subject matter addressed. NFPA encourages the use of the most current edition of any NFPA Standard [as it may be amended by TIA(s) or Errata] to take advantage of current experience and understanding. An official NFPA Standard at any point in time consists of the current edition of the document, including any issued TIAs and Errata then in effect.

To determine whether an NFPA Standard has been amended through the issuance of TIAs or corrected by Errata, visit the "Codes & Standards" section at www.nfpa.org.

#### **Interpretations of NFPA Standards**

A statement, written or oral, that is not processed in accordance with Section 6 of the Regulations Governing the Development of NFPA Standards shall not be considered the official position of NFPA or any of its Committees and shall not be considered to be, nor be relied upon as, a Formal Interpretation.

## Patents

The NFPA does not take any position with respect to the validity of any patent rights referenced in, related to, or asserted in connection with an NFPA Standard. The users of NFPA Standards bear the sole responsibility for determining the validity of any such patent rights, as well as the risk of infringement of such rights, and the NFPA disclaims liability for the infringement of any patent resulting from the use of or reliance on NFPA Standards.

NFPA adheres to the policy of the American National Standards Institute (ANSI) regarding the inclusion of patents in American National Standards ("the ANSI Patent Policy"), and hereby gives the following notice pursuant to that policy:

NOTICE: The user's attention is called to the possibility that compliance with an NFPA Standard may require use of an invention covered by patent rights. NFPA takes no position as to the validity of any such patent rights or as to whether such patent rights constitute or include essential patent claims under the ANSI Patent Policy. If, in connection with the ANSI Patent Policy, a patent holder has filed a statement of willingness to grant licenses under these rights on reasonable and nondiscriminatory terms and conditions to applicants desiring to obtain such a license, copies of such filed statements can be obtained, on request, from NFPA. For further information, contact the NFPA at the address listed below.

#### Law and Regulations

Users of NFPA Standards should consult applicable federal, state, and local laws and regulations. NFPA does not, by the publication of its codes, standards, recommended practices, and guides, intend to urge action that is not in compliance with applicable laws, and these documents may not be construed as doing so.

#### Copyrights

NFPA Standards are copyrighted. They are made available for a wide variety of both public and private uses. These include both use, by reference, in laws and regulations, and use in private self-regulation, standardization, and the promotion of safe practices and methods. By making these documents available for use and adoption by public authorities and private users, the NFPA does not waive any rights in copyright to these documents.

Use of NFPA Standards for regulatory purposes should be accomplished through adoption by reference. The term "adoption by reference" means the citing of title, edition, and publishing information only. Any deletions, additions, and changes desired by the adopting authority should be noted separately in the adopting instrument. In order to assist NFPA in following the uses made of its documents, adopting authorities are requested to notify the NFPA (Attention: Secretary, Standards Council) in writing of such use. For technical assistance and questions concerning adoption of NFPA Standards, contact NFPA at the address below.

#### For Further Information

All questions or other communications relating to NFPA Standards and all requests for information on NFPA procedures governing its codes and standards development process, including information on the procedures for requesting Formal Interpretations, for proposing Tentative Interim Amendments, and for proposing revisions to NFPA standards during regular revision cycles, should be sent to NFPA headquarters, addressed to the attention of the Secretary, Standards Council, NFPA, 1 Batterymarch Park, P.O. Box 9101, Quincy, MA 02269-9101; email: stds\_admin@nfpa.org.

For more information about NFPA, visit the NFPA website at www.nfpa.org. All NFPA codes and standards can be viewed at no cost at www.nfpa.org/docinfo.

## NFPA® 69

#### Standard on

## **Explosion Prevention Systems**

#### 2019 Edition

This edition of NFPA 69, *Standard on Explosion Prevention Systems*, was prepared by the Technical Committee on Explosion Protection Systems. It was issued by the Standards Council on November 5, 2018, with an effective date of November 25, 2018, and supersedes all previous editions.

This edition of NFPA 69 was approved as an American National Standard on November 25, 2018.

#### **Origin and Development of NFPA 69**

In 1965, an NFPA Committee was appointed to develop standards for explosion protection systems. These standards included information on inerting to prevent explosions and on venting to minimize damage from an explosion.

A tentative draft on explosion prevention systems was presented at the NFPA Annual Meeting in New York City in May 1969. This tentative document was officially adopted in May 1970. NFPA 69 was revised in 1973 and reconfirmed in 1978.

In 1982, the Committee on Explosion Protection Systems began a thorough review of NFPA 69, including the development of a chapter on the technique of deflagration pressure containment. The results of that effort became the 1986 edition.

The 1992 edition of NFPA 69 incorporated a new chapter on deflagration isolation systems. Partial amendments were made to refine definitions, improve descriptions of oxidant concentration reduction techniques, improve material on deflagration suppression, and fine-tune deflagration pressure containment material.

The 1997 edition of this standard included some reorganization and updating of the technical material to improve its usability. New material was added on enrichment to operate above the upper flammable limit as a means of explosion protection with minimum oxidant concentrations for preventing explosions. Material was added for provisions on reliability of explosion protection control systems and deflagration suppression systems for consistency with other NFPA standards.

The 2002 edition of NFPA 69 included new information on spark detection and extinguishment system design. A reorganization of the protection methods reflected a hierarchy based on the degree of explosion prevention. The limiting oxidant concentration (LOC) values for gases and vapors in Annex C were updated based on recent research. The standard was revised to reflect the requirements of the *Manual of Style for NFPA Technical Committee Documents*.

The 2008 edition incorporated a comprehensive revision to the standard that included a performance-based option in addition to the existing specification methods for explosion prevention. This revision included new requirements for detection and ignition control, suppression, and active and passive isolation. The committee also added a chapter on passive suppression using expanded metal mesh or polymer foams. A new chapter on installation, inspection, and maintenance addressed the concept of safety integrity and reliability. New definitions supporting the expanded requirements were added and existing definitions were updated to conform to the *NFPA Glossary of Terms*.

The 2014 edition was revised and updated to improve the overall clarity and use of the document. Design requirements for flow-actuated flap valves and a new annex, Deflagration Containment Calculation Method for Two Interconnected Vessels, were incorporated. The operating safety margins for oxidant concentration control were also modified in order to remove discontinuity. In addition, the use of the term *commissioning* was updated throughout the document for compatibility with the 2012 edition of NFPA 3, *Recommended Practice for Commissioning and Integrated Testing of Fire Protection and Life Safety Systems.* 

NFPA and National Fire Protection Association are registered trademarks of the National Fire Protection Association, Quincy, Massachusetts 02169.

In the 2019 edition, the adjustment for LOC values obtained in flammability tubes has been revised, reconfirming the change made by a Tentative Interim Amendment (TIA) to the 2014 edition. Requirements have been added to consider the concentration variation with time and location within the protected enclosure, and all foreseeable variations in operating conditions and material loadings, when using the combustible concentration reduction method of explosion prevention. A new section on safety instrumented systems (SIS) has been added with the requirement that explosion prevention system controls installed after November 5, 2021, be implemented as an SIS. New annex material has been added to provide example calculations on how to estimate the LOC for a fuel or a fuel mixture.

Laura E. Moreno, NFPA Staff Liaison

Laurence G. Britton, Process Safety Consultant, WV [SE]

This list represents the membership at the time the Committee was balloted on the final text of this edition. Since that time, changes in the membership may have occurred. A key to classifications is found at the back of the document.

NOTE: Membership on a committee shall not in and of itself constitute an endorsement of the Association or any document developed by the committee on which the member serves.

**Committee Scope:** This Committee shall have primary responsibility for documents on explosion protection systems for all types of equipment and for buildings, except pressure venting devices designed to protect against overpressure of vessels such as those containing flammable liquids, liquefied gases, and compressed gases under fire exposure conditions, as now covered in existing NFPA standards.

#### NFPA 69

#### Standard on

## **Explosion Prevention Systems**

#### 2019 Edition

IMPORTANT NOTE: This NFPA document is made available for use subject to important notices and legal disclaimers. These notices and disclaimers appear in all publications containing this document and may be found under the heading "Important Notices and Disclaimers Concerning NFPA Standards." They can also be viewed at www.nfpa.org/disclaimers or obtained on request from NFPA.

UPDATES, ALERTS, AND FUTURE EDITIONS: New editions of NFPA codes, standards, recommended practices, and guides (i.e., NFPA Standards) are released on scheduled revision cycles. This edition may be superseded by a later one, or it may be amended outside of its scheduled revision cycle through the issuance of Tentative Interim Amendments (TIAs). An official NFPA Standard at any point in time consists of the current edition of the document, together with all TIAs and Errata in effect. To verify that this document is the current edition or to determine if it has been amended by TIAs or Errata, please consult the National Fire Codes<sup>®</sup> Subscription Service or the "List of NFPA Codes & Standards" at www.nfpa.org/docinfo. In addition to TIAs and Errata, the document information pages also include the option to sign up for alerts for individual documents and to be involved in the development of the next edition.

NOTICE: An asterisk (\*) following the number or letter designating a paragraph indicates that explanatory material on the paragraph can be found in Annex A.

A reference in brackets [] following a section or paragraph indicates material that has been extracted from another NFPA document. As an aid to the user, the complete title and edition of the source documents for extracts in mandatory sections of the document are given in Chapter 2 and those for extracts in informational sections are given in Annex H. Extracted text may be edited for consistency and style and may include the revision of internal paragraph references and other references as appropriate. Requests for interpretations or revisions of extracted text shall be sent to the technical committee responsible for the source document.

Information on referenced publications can be found in Chapter 2 and Annex H.

#### Chapter 1 Administration

**1.1 Scope.** This standard applies to the design, installation, operation, maintenance, and testing of systems for the prevention of explosions by means of the following methods:

- (1) Control of oxidant concentration
- (2) Control of combustible concentration
- (3) Predeflagration detection and control of ignition sources
- (4) Explosion suppression
- (5) Active isolation
- (6) Passive isolation
- (7) Deflagration pressure containment
- (8) Passive explosion suppression

## 1.2 Purpose.

**1.2.1** This standard shall cover the minimum requirements for installing systems for the prevention of explosions in enclo-

sures that contain flammable concentrations of flammable gases, vapors, mists, dusts, or hybrid mixtures.

**1.2.2** This standard shall provide basic information for design engineers, operating personnel, and authorities having jurisdiction.

**1.2.3\*** To meet a minimum level of reliability, explosion prevention and control systems provided in accordance with the requirements of this standard shall include, but not be limited to, the following:

- (1) Design system verification through testing
- (2) Design documentation
- (3) System acceptance
- (4) Management of change
- (5) Regular testing and maintenance

**1.3\* Application.** This standard shall apply to methods for preventing and controlling explosions where the need for such methods has been established.

- ▲ 1.3.1 Where provided, explosion prevention shall be achieved by one or more of the following methods as required to mitigate damage, prevent transport of an ignition source, and prevent deflagration:
  - (1) Using the methods in Chapter 7 or 8 to control the environment within the protected enclosure so that a deflagration cannot occur
  - (2) Using the methods in Chapter 11 or 12 to prevent the propagation of a deflagration
  - (3) Using the methods in Chapters 10, 13, or 14 or in NFPA 68 to mitigate the effects of the deflagration so that the protected enclosure will not be uncontrollably breached

**1.3.1.1** It shall be permitted to use the methods in Chapters 4 and 5 in lieu of the methods in Chapters 7 through 14.

**1.3.1.2** This standard shall apply to methods for predeflagration detection or control of an ignition. When desired by the owner or operator, or required by the authority having jurisdiction, or when required by other standards, predeflagration detection or control of an ignition shall be achieved by methods described in Chapter 9.

**1.3.1.2.1** These methods shall be permitted to be used independently to reduce the frequency of deflagrations where explosion prevention is not required.

**1.3.1.2.2** These methods shall be permitted to be used as an additional detector for a method of Chapter 10, 11, 12, or 13.

**1.3.1.2.3** These methods shall not interfere with the operation of the validated system.

**1.3.1.2.4** These methods shall not be permitted to be used as the sole detector for a method of Chapter 10, 11, 12, or 13.

**1.3.1.3\*** When another standard requires explosion prevention or control in accordance with NFPA 69 for an enclosure and that enclosure is interconnected to other enclosures by a line containing combustible dust, gas, mist, or hybrid mixtures that could transmit flame or pressure from the original enclosure, explosion prevention or control shall be provided for interconnected enclosures by one of the following methods:

(1) Deflagration isolation as discussed in Chapters 11 and 12

2019 Edition

Shaded text = Revisions.  $\Delta$  = Text deletions and figure/table revisions. • = Section deletions. N = New material.

- (2) Explosion venting of the interconnected enclosures within the limitations specified in Section 8.10 of NFPA 68
- (3) Containment as discussed in Chapter 13
- (4) Expanded metal mesh or polymer foam as discussed in Chapter 14

**1.3.1.4** It shall be permitted to eliminate deflagration isolation protection for interconnected enclosures based on a documented risk analysis acceptable to the authority having jurisdiction, unless isolation protection is specifically required for such enclosure by other standards.

**1.3.2** This standard shall not apply to the following conditions:

- (1) Devices or systems designed to protect against detonations
- (2)\* Design, construction, and installation of deflagration vents
- (3) Protection against overpressure due to phenomena other than internal deflagrations
- (4) Chemical reactions other than combustion processes
- (5) Unconfined deflagrations, such as open-air or vapor cloud explosions
- (6) Rock dusting of coal mines, as covered by 30 CFR 75
- (7) General use of inert gas for fire extinguishment
- (8)\* Preparation of tanks, piping, or other enclosures for hot work, such as cutting and welding
- (9) Ovens or furnaces handling flammable or combustible atmospheres, as covered by NFPA 86
- (10) Marine vapor control systems regulated by 33 CFR 154
- (11) Marine vessel tanks regulated by 46 CFR 30, 46 CFR 32, 46 CFR 35, and 46 CFR 39

**1.4 Retroactivity.** The provisions of this standard reflect a consensus of what is necessary to provide an acceptable degree of protection from the hazards addressed in this standard at the time the standard was issued.

**1.4.1** Unless otherwise specified, the provisions of this standard shall not apply to facilities, equipment, structures, or installations that existed or were approved for construction or installation prior to the effective date of the standard. Where specified, the provisions of this standard shall be retroactive.

**1.4.2** In those cases where the authority having jurisdiction determines that the existing situation presents an unacceptable degree of risk, the authority having jurisdiction shall be permitted to apply retroactively any portions of this standard deemed appropriate.

**1.4.3** The retroactive requirements of this standard shall be permitted to be modified if their application clearly would be impractical in the judgment of the authority having jurisdiction, and only where it is clearly evident that a reasonable degree of safety is provided.

**1.5 Equivalency.** Nothing in the standard is intended to prevent the use of systems, methods, or devices of equivalent or superior quality, strength, fire resistance, effectiveness, durability, and safety over those prescribed by this standard.

**1.5.1** Technical documentation shall be submitted to the authority having jurisdiction to demonstrate equivalency.

**1.5.2** The system, method, or device shall be approved for the intended purpose by the authority having jurisdiction.

#### **Chapter 2** Referenced Publications

**2.1 General.** The documents or portions thereof listed in this chapter are referenced within this standard and shall be considered part of the requirements of this document.

#### 2.3 Other Publications.

▲ 2.3.1 API Publications. American Petroleum Institute, 1220 L Street, NW, Washington, DC 20005-4070.

API 510, Pressure Vessel Inspection Code: In-Service Inspection, Rating, Repair, and Alteration, 2014.

△ 2.3.2 ASME Publications. American Society of Mechanical Engineers, Two Park Avenue, New York, NY 10016-5990.

ASME B31.3, Process Piping, 2016.

Boiler and Pressure Vessel Code, 2015.

**2.3.3 ASTM Publications.** ASTM International, 100 Barr Harbor Drive, P.O. Box C700, West Conshohocken, PA 19428-2959.

ASTM D257, Standard Test Methods for DC Resistance or Conductance of Insulating Materials, 2014.

ASTM D3574, Standard Test Methods for Flexible Cellular Materials — Slab, Bonded, and Molded Urethane Foams, 2016.

ASTM E1354, Standard Test Method for Heat and Visible Smoke Release Rates for Materials and Products Using an Oxygen Consumption Calorimeter, 2017.

ASTM E2079, Standard Test Method for Limiting Oxygen (Oxidant) Concentration in Gases and Vapors, 2007 (reapproved 2013).

**2.3.4 ISO Publications.** International Organization for Standardization, ISO Central Secretariat, BIBC II, Chemin de Blandonnet 8, CP 401, 1214 Vernier, Geneva, Switzerland.

ISO 16852, Flame arresters — Performance requirements, test methods and limits for use, 2016.

**2.3.5 Military Specifications.** Department of Defense Single Stock Point, Document Automation and Production Service, Building 4/D, 700 Robbins Avenue, Philadelphia, PA 19111-5094.

MIL-DTL-83054C, Baffle and Inerting Material, Aircraft Fuel Tank, 2003.
